

STATEMENT OF WORK (SOW)

1. PROJECT OVERVIEW

Client requires the design, development, deployment, and support of **Staffing Resources Hub**, a secure, enterprise-grade multilingual interpreting and translation platform incorporating:

- VRI (Video Remote Interpreting)
- OPI
- On-site interpreting scheduling
- Translation project scheduling
- AI-powered automation, Co-pilot functionality, and voice-command interaction
- Integrations with MS Teams, Zoom, Google Meet, WebEx, Salesforce, and external systems
- Full enterprise security (HIPAA, CJIS, SOC2, GDPR, GLBA)
- Analytics, reporting, auditing
- Role-based portals for Client, Interpreter, Scheduler/PM, and Admin
- Full code ownership and transfer to Client

This SOW defines Phase 1 work and governs delivery, quality, SLAs, confidentiality, IP ownership, timelines, and penalties.

2. PROJECT OBJECTIVES

The platform shall:

1. Deliver a unified, scalable ecosystem for multilingual interpreting with AI and automation.
2. Allow clients to request interpreters via video, phone, mobile app (future phase), voice-command, API, or onsite request.
3. Provide separate secured portals for Client, Interpreter, Scheduler/PM, and Admin.
4. Ensure full compliance with U.S. legal, healthcare, insurance, banking, and educational standards.
5. Support thousands of concurrent VRI/OPI sessions with high performance.
6. Grant full and exclusive IP ownership to Client for all deliverables, code, algorithms, AI models, designs, and documentation.

3. PROJECT SCOPE & MODULES

A. User Management

- Interpreter onboarding, credential verification, CE tracking
- Document uploads, background checks, compliance alerts
- RBAC (Admin, Scheduler/PM, Interpreter, Client, Client Team)
- AI-based interpreter scorecard
- Alerts, messaging
- Invoicing, reporting
- User access and information management

B. Interpreter Console

- Job lifecycle: Available / Applied / Assigned / Confirmed / Completed / Delivered / Invoiced / Paid
- Real-time call alerts
- Training library + CE compliance tracking
- AI call Co-pilot (prompts, mistranslation alerts)
- Google/Outlook calendar sync
- Automated reminders

C. Client Portal

- One-click VRI/OPI/On-site request
- Optimized interpreter matching engine
- Voice-command request interface
- Document upload for translation work
- Virtual lobby, screen-share, chat
- Transcripts, summaries, session history
- Billing, usage reporting, SLAs
- Department-level budgets & settings
- Geolocation
- Instant customer support (chat or phone)

D. Scheduler / PM Portal

- Assignment lifecycle management

- Interpreter matching with conflict-of-interest detection
- Audit access to in-progress calls
- Interpreter performance dashboard
- Training assignment & compliance enforcement

E. Admin Portal

- User management
- Rates engine + billing management
- Interpreter payroll
- Alerts (late arrival, expiring compliance, low availability)
- Action assignments (submit document, complete training, etc.)
- Recordings management
- Tamper-proof audit logs
- Department/branch controls
- Usage, languages, financial, compliance reporting

F. Interpreting Modes

1. VRI — WebRTC/Twilio/Agora HD video, captioning, translations, multi-party, fallback audio, tone/sentiment analysis, pace tracker, terminology updates.

2. OPI — DID routing, IVR bot intake, multi-party, interpreter announcement, call recording (optional), terminology updates, slow-down alerts, pace tracker.

3. On-Site Scheduling — GPS tracking, arrival detection, QR attendance, mileage logs, real-time ETA updates.

G. AI & Automation Layer

AI Scheduler Optimizer, Interpreter Co-Pilot, STT, auto-translation, mistranslation detection, bilingual summaries, predictive analytics, automated compliance reports.

H. Integrations (Phase 1)

Teams App, Zoom Marketplace, WebEx, Google Meet, Salesforce Connector, REST APIs, Webhooks, SDKs/Widgets.

I. Security & Compliance

- HIPAA, CJIS, SOC2-Type II, PCI, GLBA, GDPR
- AES-256 + TLS 1.3
- Audit & access logs
- Retention + auto-deletion rules

J. Recording & Transcript Management

Timestamped transcripts, optional audio/video recording, retention options (30 days to 7+ years), RBAC visibility.

5. DELIVERABLES

Must deliver ALL of the following:

- Complete & exclusive source code (frontend, backend, AI, APIs)
- Weekly commits to **Client-owned GitHub repository**
- Database ERDs + schemas
- UX/UI Figma designs
- Fully functioning portals
- VRI/OPI/On-site modules

- AI automation suite
- API documentation (OpenAPI/Swagger)
- DevOps CI/CD (Docker, Kubernetes)
- Technical architecture documentation
- End-user documentation
- Training sessions
- Deployment to Client's environment

For each module:

- Deliverables must pass acceptance criteria
- No P0/P1 defects
- Client signs off in writing
- Code is committed to Client's GitHub
- Then milestone is released

6. ACCEPTANCE CRITERIA (EXPANDED)

A module is accepted when:

1. Delivered to Client test environment
2. Passes documented test cases
3. No critical (P0/P1) bugs remain
4. Meets UX/UI specifications as per Figma

5. Meets performance benchmarks (load, API latency, stability)
6. Meets security compliance (HIPAA/CJIS/SOC2/GDPR)
7. Source code delivered and functional in Client's environment
8. Documentation is complete and accurate
9. Client issues written approval
